Welcome to the stakeholder survey on *A Protein Plan for Europe*

Thank you very much for agreeing to take part in our survey.

Your input will help the European Commission to better prepare the report on *A Protein Plan for Europe*. This report will build upon existing knowledge and national and regional experiences and is planned to be published end of 2018.

Your expertise, thoughts and opinions are highly appreciated.

The survey should not take longer than 20 minutes to complete.

**The deadline to reply is Friday 23rd March 2018.**

Additional remarks and documents can be attached at the end of the questionnaire (in any official EU language).

If you have further questions about the survey please email us to AGRI-G4@ec.europa.eu

### II. About you

* **Country of residence**

- [ ] Austria
- [x] Belgium
Bulgaria
Croatia
Cyprus
Czech Republic
Denmark
Estonia
Finland
France
Germany
Greece
Hungary
Ireland
Italy
Latvia
Lithuania
Luxembourg
Malta
Netherlands
Poland
Portugal
Romania
Slovak Republic
Slovenia
Spain
Sweden
United Kingdom
Other

If other, please specify:

*Confidentiality and access to documents*

Note that, whatever option chosen, your answers may be subject to a request for public access to documents under Regulation (EC) No 1049/2001.

Your contribution

☑ can be published with your personal information. I consent to the publication of all information in my contribution in whole or in part including my name or my organisation's name, and I declare that nothing within my response is unlawful or would infringe the rights of any third party in a manner that would prevent publication.

☐ can be published provided that you remain anonymous. I consent to the publication of all information in my contribution in whole or in part (which may include quotes or opinions I express) provided that it is done anonymously. I declare that nothing within my response is unlawful or would infringe the rights of any third party in a manner that would prevent publication.
Type of organisation

- Farmer/Farmers’ association
- Consumer/Consumer organisation
- Company/Industry association
- Research and academia
- Non-governmental organisation
- Public authority (national or regional)
- International organisation
- Other

Please specify the sector

- Agriculture - crop production
- Agriculture - livestock production
- Food processing industry
- Feed processing industry
- Other processing industry
- Agricultural trade
- Research
- Civil society
- Other

If other, please specify:

Public health

III. Questions

1. Have you been involved or are you aware of any ongoing public or private initiatives to support plant protein production in the EU?

- yes
- no

If yes, please specify (including link to relevant documentation):

Scope
2. Which sources of plant proteins would you consider most relevant to address in the Commission report on plant proteins?

<table>
<thead>
<tr>
<th>Source of Plant Proteins</th>
<th>Highly relevant</th>
<th>Partly relevant</th>
<th>Not relevant</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cereals</td>

<td>O</td>
</tr>
</tbody>
</table>

If other, please specify: 

If needed, please provide further comments to your answer:

1000 character(s) maximum

- The Commission should prioritise legumes best suited for direct human consumption. Recommendations for a healthy diet include eating more vegetables, fruit, legumes, nuts & whole grains, while cutting down on salt, sugar and fat. (WHO, http://bit.ly/1n3oyHq) These can also bring significant environmental benefits if combined with reduction in meat and dairy consumption.
- “Across studies, consistent evidence indicated that a dietary pattern higher in plant-based foods...and lower in animal-based foods (especially red meat), as well as lower in total energy, is both healthier and associated with a lesser impact on the environment.” (Nelson et al. http://bit.ly/21K1vi)
- A 2017 report by the High Level Panel of Experts on Food Security and Nutrition (http://bit.ly/2GaqD3) recommends to, inter alia, increase the intake of fruits, vegetables, legumes, nuts and whole grains; moderate the consumption of animal-based foods (dairy, meat, eggs shellfish) and limit processed meats.

3. Which areas would you address as priority in relation to plant proteins in Europe?

Please mark the five areas you consider most important:

- [ ] Research and innovation
- [ ] Yield improvement
- [x] Protein quality
Replacing proteins from red and processed meat with healthy plant-based proteins can bring significant co-benefits for environment and health. This in particular in the European context with high levels of animal product consumption. (PBL, http://bit.ly/2DJ9Pu5)

A modelling exercise of the effects of a 50% reduction in the intake of beef, dairy, pork, poultry and eggs linked to an equivalent reduction in production, showed: 40% reduction in saturated fat intake, bringing saturated fats closer to WHO recommended levels, Red meat consumption close to the maximum level recommended by the WCRF; Decrease in EU greenhouse gas emissions by 19-42% (http://bit.ly/2DI5LdJ)

Replacing proteins from red and processed meat with healthy plant-based proteins could also increase land availability.

4. Which of the following policy measures would you consider having the most positive impact on soya and other legume crops?

at most 5 choice(s)

☑ Voluntary Coupled Support payments under the Common Agricultural Policy
☑ Greening requirements – Crop diversification under the Common Agricultural Policy
☑ Greening requirements – Ecological Focus Areas under the Common Agricultural Policy
☑ Agri-Environment-Climate measures under the Common Agricultural Policy
☐ Investment aid under the Common Agricultural Policy
☐ Risk management under the Common Agricultural Policy
☑ Knowledge transfer (extension services, trainings, model demonstration networks)
☐ EU Research Policy – Horizon 2020
☐ EU Renewable Energy Policy
☐ EU Trade Policy
☐ Other policy measures at EU level
☐ Other policy measures at national/regional level

If other, please specify:

If needed, please provide further comments to your answer:

1000 character(s) maximum
If needed, please provide further comments to your answer:

1000 character(s) maximum

- The upcoming CAP reform represents a good policy opportunity to support plant protein production for human food. Such production should not however replace areas earmarked to improve environmental quality like ecological focus areas, or entail any further biodiversity losses.
- VCS should be focused on supporting locally adapted protein crops that can maximise agronomic and environmental benefits.

5. If further action should be taken to support plant proteins in the EU, who do you think should take such action?

at most 2 choice(s)

- EU Institutions
- Member States (national authorities)
- Regional authorities
- Combination of EU, national and/or regional authorities
- Private operators in the supply chain
- Farmers’ associations and cooperatives
- Other

If other, please specify:

If needed, please provide further comments to your answer:

1000 character(s) maximum

Farmers, and authorities at all levels should be involved. Civil society organisations working on health and environmental issues should also be involved in the development of an EU plant protein strategy.

Agricultural practices and environmental benefits

6. Which are the most important agronomic and environmental benefits of soya and other legume crops in your opinion?

<table>
<thead>
<tr>
<th></th>
<th>Very important</th>
<th>Important</th>
<th>Neutral</th>
<th>Less important</th>
<th>Not important</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Crop diversification / crop rotation</td>

Biodiversity

Other

If other, please specify:

If needed, please provide further comments to your answer:

1000 character(s) maximum

Replacing proteins from red and processed meat with healthy plant-based proteins can bring significant co-benefits for environment and health. This in particular in the European context with high levels of animal product consumption. (PBL, http://bit.ly/2DJ9Pu5). Studies have highlighted the opportunity costs of using human edible crops for animal feed. In 2010, the global livestock sector used 6 billion tonnes of food – 14% of which was human edible. 14% of global agricultural land, equating to half of global arable land which would be suitable for growing human-edible crops, is used for livestock grazing. Including land used for feed production, a total of about 40% of global arable land is used to rear and feed livestock. (http://bit.ly/2u4dZND)

Markets

7. In your experience, which of the following is most relevant to strengthen the plant protein supply/value chains in EU?
<table>
<thead>
<tr>
<th>Quantity of supply</th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Quality of supply</td>
<td></td>

If needed, please provide further comments to your answer:
1000 character(s) maximum

10. Which are the most promising market segments/value chains for EU plant proteins?

- Commodity markets in (global) feed value chains
- Regional feed value chains (incl. quality certification/label)
- On-farm feed uses
- Commodity markets in (global) food value chains
- Regional food value chains (incl. quality certification/label)
- Bio economy/industrial value chains (non-food/non-feed)
- Other

Concluding Questions - Challenges and Opportunities

14. What are the key challenges facing plant proteins in the EU for the coming 5 to 10 years?

2000 character(s) maximum

...In light of the need to ensure sustainable food and nutrition security in the context of an increasing world population, there are considerable concerns about the global resource use inefficiencies involved in the conversion on a mass scale of plant-based proteins into animal-based proteins. (FAIRR, http://bit.ly/2u7W3lk)

15. What are the key opportunities offered to plant proteins in the EU for the coming 5 to 10 years?

2000 character(s) maximum
• Economic opportunities - global meat substitutes market is expected to grow by 8.4% by 2020. Europe accounts for 39% of sales. (http://bit.ly/2IDs4ET)
• Key opportunity to promote sustainable healthy diets and their co-benefits. See more EUPHA (http://bit.ly/2DcWawp) and EPHA (http://bit.ly/2mxiVGf)
• Investor interest in protein transition – for example the Farm Animal Investment Risk and Return (FAIRR) initiative highlighting the opportunities of shifting from animal-based to plant-based protein production (http://www.fairr.org)

Please feel free to **upload any complimentary document** e.g. a strategy paper or position paper on plant proteins (maximum 5 pages)

Please upload your file
The maximum file size is 1 MB

Thank you very much for taking part in our survey!
