

Editorial

Where are the women? Science, healthcare, and the cost of exclusion.

Today, women still suffer worse health outcomes than men in many scenarios. They experience higher mortality rates after a heart attack, poorer self-reported health due to chronic conditions, and significant economic disadvantages that, paired with adverse life experiences, contribute to higher prevalence of mental health issues. We can identify multiple root-causes of this systemic problem: neglecting the effects of sex and gender in health research, chronic under investment in health conditions that affect women uniquely or disproportionately, and societal attitudes that undermine and diminish women's health concerns as secondary, incidental or imagined. The result is not solely due to inequity – it is a product of healthcare systems built on blind spots.

Bridging the gender gap in access to health requires a multifaceted approach, but one thing is clear: women-driven discoveries and patents are more likely than men's to tackle women's health, yet fewer women lead in innovation, research and healthcare. According to a [recent publication](#) in *Science*, "the inventor gender gap is partially responsible for thousands of missing female-focused inventions since 1976". Sadly, today's numbers are far from promising. While women are in charge of 67% of paid global healthcare activities and 76% of all unpaid care activities, they only represent 26% of leadership positions in healthcare. Unfortunately, and despite the lack of transparent data on the matter, women's academic careers follow a concerning mirrored trajectory. Women are over represented in health science classrooms, earn their doctoral degrees at similar rates to men, yet remain drastically underrepresented in tenure-track positions and governing boards.

Science and healthcare are at a pivotal moment where gender equity must be at the forefront of progress.

This newsletter examines the undeniable impact of women in science – those who pioneer vaccines, lead digital health revolutions, and challenge outdated models of research, while confronting barriers that continue to hold them back.

From the structural inequalities that limit women's influence in scientific decision-making, to the urgent need for gender-balanced policies in digital health, we examine the systemic shifts required to ensure that women are not just present, but leading the way. The pieces within highlight how greater representation of women in STEM fields fosters more inclusive healthcare solutions, how mentorship and visibility empower the next generation, what's lost when women's leadership is sidelined, and why breaking the leadership gap is essential to driving transformative change. Women are already shaping the future of science and healthcare, but their full impact depends on breaking down the barriers that still stand in their way. Ensuring access, recognition, and leadership opportunities is not just a matter of fairness, it's essential for progress. The challenge ahead is clear: will the world continue to restrain women's potential, or will it finally embrace its true value?

Women in science: breaking barriers to advance health equity

"Science has always been a powerful force for progress and for doing good, transforming the way we prevent disease, treat illness, protect public health - and, ultimately, improve people's lives and longevity. Yet, for too long, the contributions of women in science - particularly in health and medicine - have been undervalued, underrepresented and underutilized."

Dr Natasha Azzopardi Muscat, Director, Division of Country Health Policies and Systems, WHO/Europe

EPHA Updates

EPHA co-authors WHO CSO Commission report on "Civil society engagement in the development of World Health Assembly resolutions and decisions"

This landmark study, co-authored by EPHA's DG, Dr Milka Sokolović, alongside three other members of the WHO CSO Commission Steering Committee, evaluates civil society's involvement in shaping three key resolutions at the 77th World Health Assembly (WHA77). It offers an in-depth exploration of interactions between civil society, the WHO Secretariat, and Member States on critical topics.

CIVIL SOCIETY ENGAGEMENT IN THE DEVELOPMENT OF WORLD HEALTH ASSEMBLY RESOLUTIONS AND DECISIONS

G2H2.ORG

Launch of CSO Commission working group study “Civil society engagement in the development of WHA resolutions and decisions”

EPHA had the honour of co-organising the launch of the World Health Organization CSO Commission report: Civil Society Engagement in the Development of World Health Assembly Resolutions and Decisions.

The launch webinar featured insights from co-authors, including EPHA’s Director General Milka Sokolović, and a panel discussion on civil society’s role in shaping three key 77th World Health Assembly resolutions: the resolutions on social participation, climate change and health, and the WHO’s Fourteenth General Programme of Work (GPW14).

Unlocking Europe's future: Prioritising Health under the next Multiannual Financial Framework

When: 26 March 2025 | 15:00-17:00 CET

Where: Room SPINELLI 5G1, European Parliament, Brussels

Hosted by:
MEP Tilly Metz (Greens/EFA), MEP Stine Bosse (Renew),
MEP Vytenis Andriukaitis (S&D), MEP András Kulja (EPP)

Save the date: EU4Health Civil Society Alliance event on health in the next Multiannual Financial Framework

The EU4Health Civil Society Alliance organises an event on 26 March 2025 titled “Unlocking Europe’s future: Prioritising Health under the next Multiannual Financial Framework” and taking place at the European Parliament. This event will be hosted by Members of the European Parliament Tilly Metz (Greens, Luxembourg), Stine Bosse (Renew, Denmark), Vytenis Andriukaitis (S&D, Lithuania) and András Tivadar Kulja (EPP, Hungary).

In view of the new EU mandate, the EU4Health Civil Society Alliance, which gathers more than 30 health-focused civil society organisations, has continuously called for a strong and stable EU health funding which empowers all stakeholders to sustain continuous operations. The event’s aim is to reflect on the future of the European Health Union and the place of health in the next MFF.

EPHA (AISBL) is the European Platform bringing together public health organisations representing health professionals, patients groups, health promotion and disease specific NGOs, academic groupings and other health associations.
